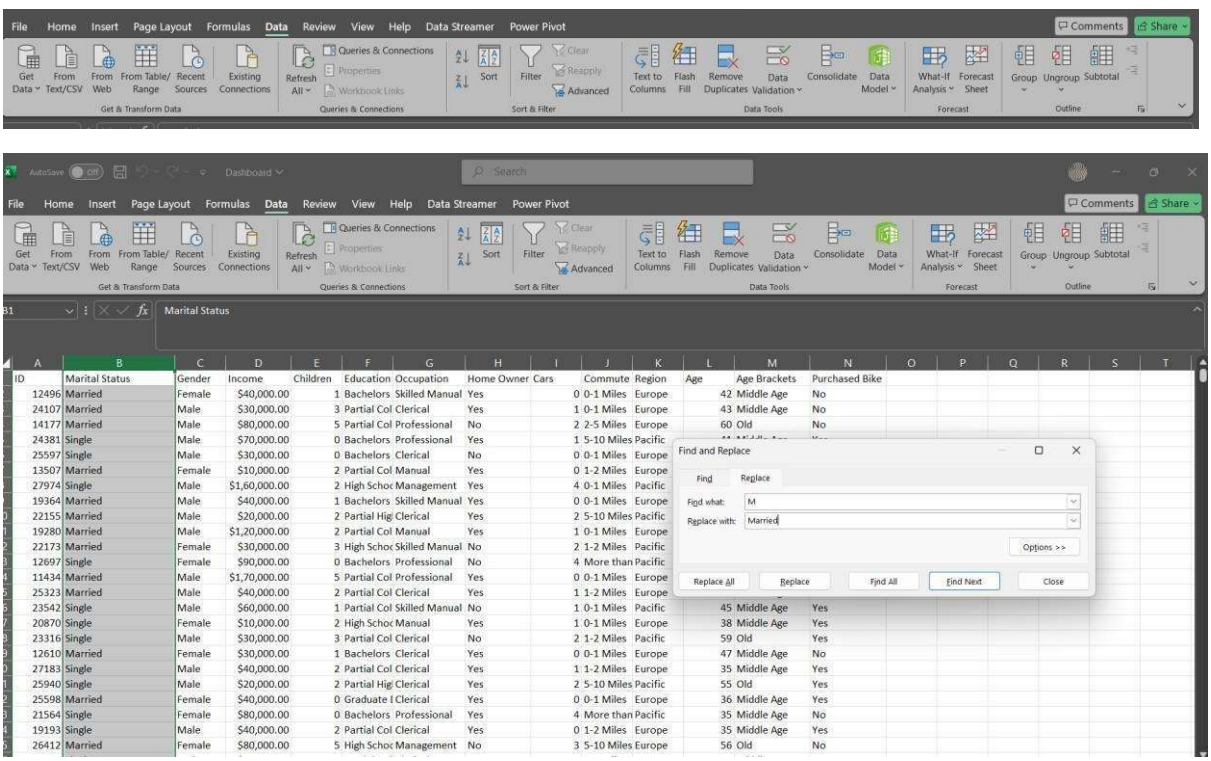
Step 2: Cleaning and pre-processing the dataset for the better visualization. Using the key Data you can remove the duplicates in the entries. To know clearly about the dataset for the user making changes in row 2 & 3.



Step 3: For the Bike sales we need to capture the specific age group so include a row (Age Brackets) for the better view.

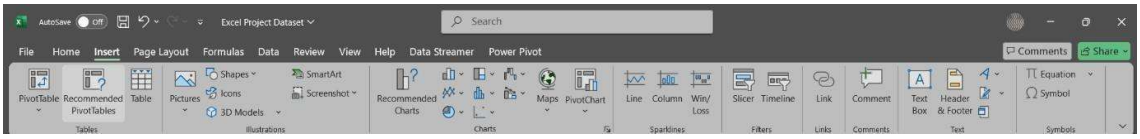
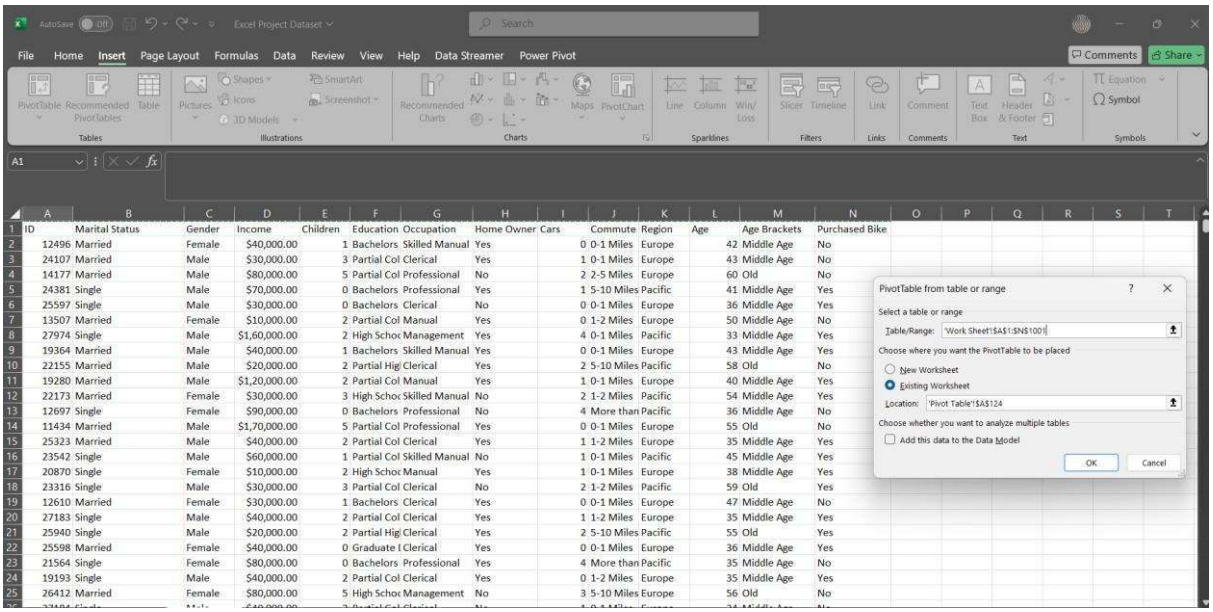
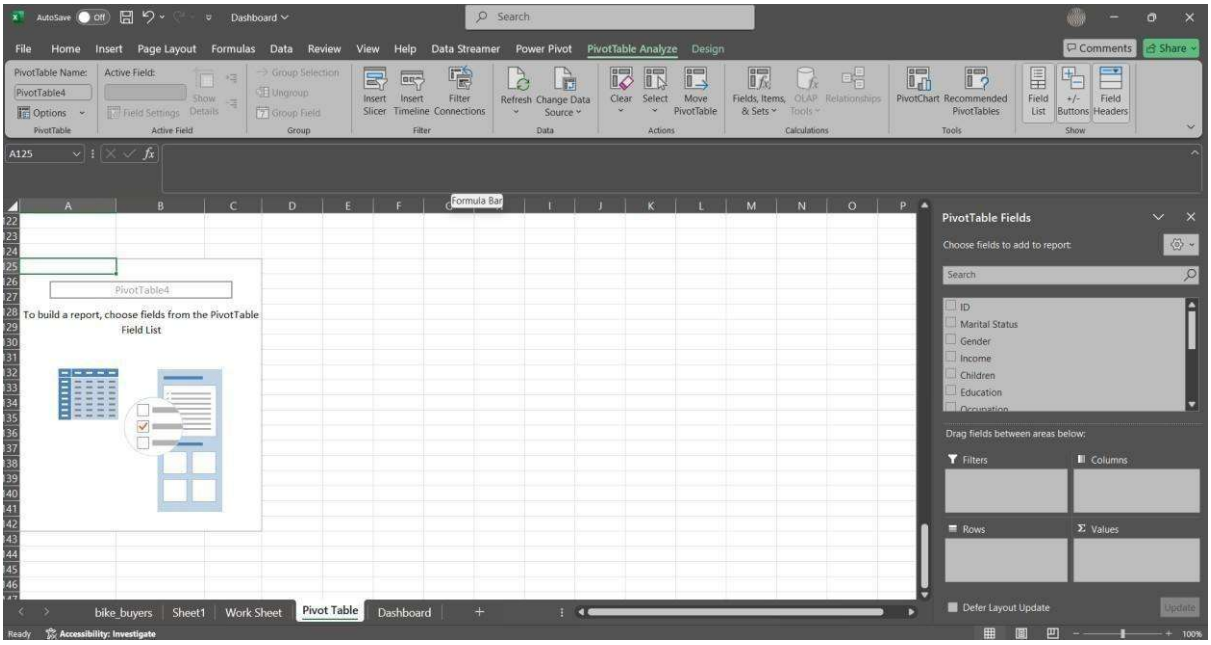
Step 5: After the completion of the data cleaning and pre-processing now we can start to create the pivot table. Make an add of a sheet in the same board to work pivot table in different table.



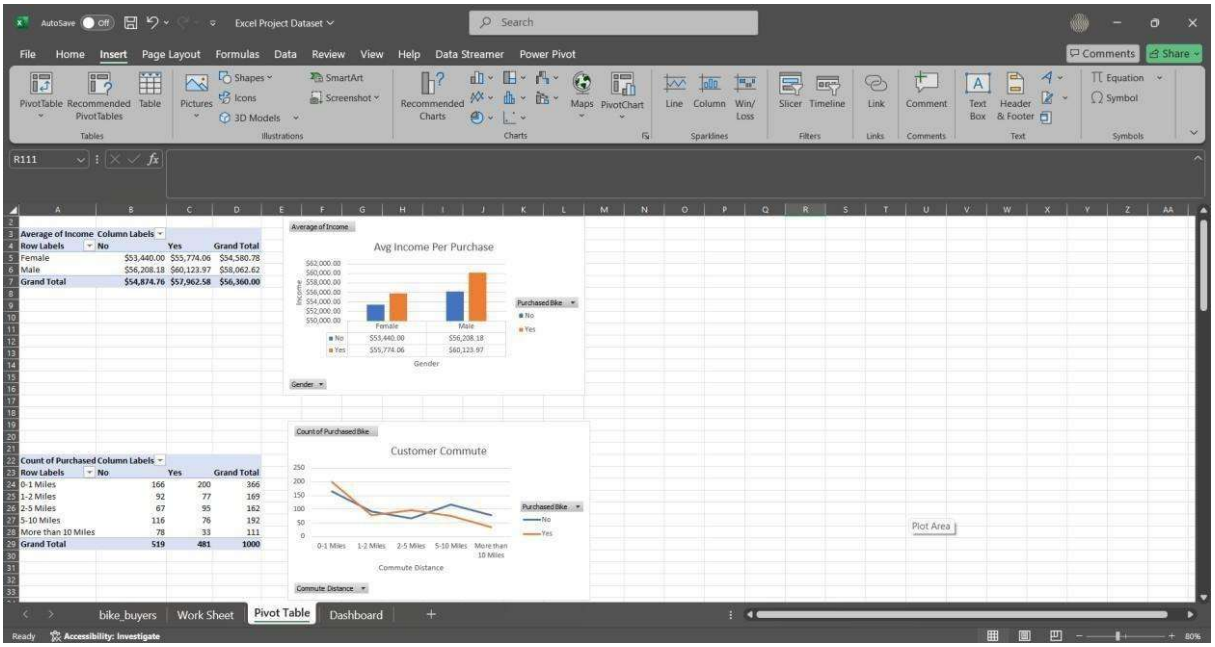
Step 6: Select the pivot table and in the down, you can see the dataset select that sheet and give ctrl+a to work on the pivot table.

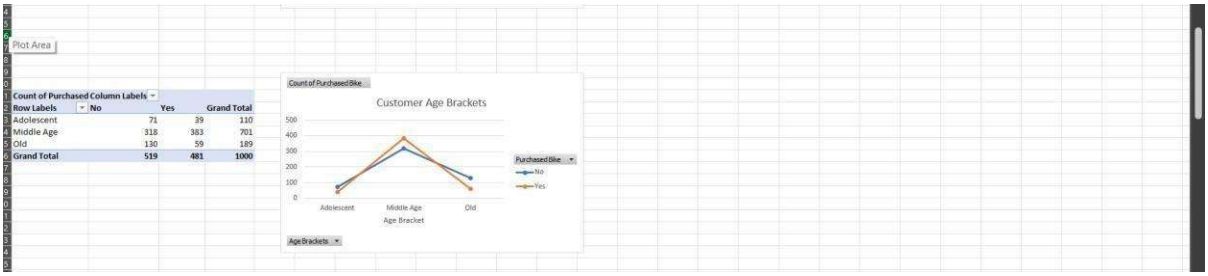


Step 7: For the user needs we can select and drag the option to make chart with following datasets to make understand the user we can use charts too.

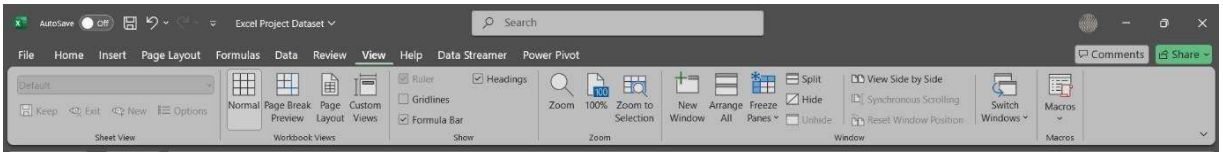


Step 8: Using recommended charts we can visualize the total value which we taken in pivot table.

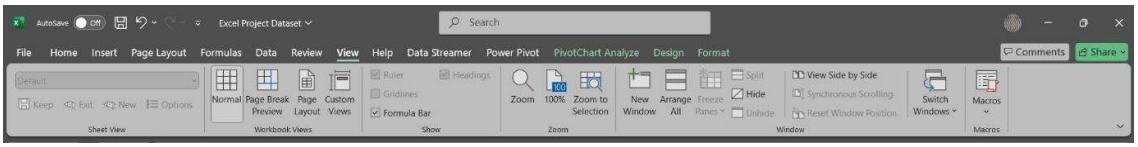




Step 9: Now creating a Dashboard in the excel sheet same like pivot table add a sheet for dashboard. Using the view option you can edit the grid lines.



Step 10: Design the dashboard to look with informative and user friendly. Using pivot chart analysis option, you can work on the design and slicer to know about the detail information of pivot chart.



RESULT:

Thus the Data Analysis and Visualization using Advanced Excel was implemented successfully.
